

Reviewer Comments

Dear Dr Uddin,

Your manuscript, "Association Between Internet Use and Unmet Need for Family Planning among Ever- Married Women in Bangladesh: Evidence from BDHS 2022", has now been assessed.

Kindly address the points mentioned below along with the editorial comments:

Please note that all manuscripts must contain all of the following sections under the heading 'Declarations'. The Declarations section should follow the Conclusions section, and be included before the References.

Abbreviations

Ethics approval and consent to participate

Consent for publication

Availability of data and materials

Competing Interests

Funding

Authors' contributions

Acknowledgements

Please see here for details on the information to be included in these sections:

<https://link.springer.com/journal/12905/submission-guidelines>

If the information required is already provided in the main manuscript, please also copy the statements to the relevant section in the Declarations.

If any of the sections are not relevant to your manuscript, please include the heading and write "Not applicable" underneath that section heading.

We invite you to revise your paper, carefully addressing the comments from the reviewers and the editor. Please ensure the results are accurately reported, any overstated conclusions are rewritten and the limitations of the work fully explained. When your revision is ready, please submit the updated manuscript and a point-by-point response. This will help us move to a swift decision.

We recommend submitting all revisions within the mentioned deadline.

If you need more time, please contact us and include your submission ID.

Kind regards,

Kranti Pabale

The authors have tapped into an important topic. However, I am sharing some concerns that the authors might consider in revisiting their work.

(1) Title and the Abstract indicate that the paper addresses ever married women but Methods section in the body of the manuscript describes the sample participants are currently pregnant women. I'm wondering if it used a sample of ever married pregnant women. If so, I'd indicate that.

(2) Figure 1 is most uninformative. I'd create a sample flowchart clearly showing the numbers of included and excluded participants at each stage, and the missing values, ultimately reaching the final analytical sample.

(3) I'm curious about how the authors addressed the cluster nature of the data. You might consider using mixed or multilevel models, or adjust for the cluster variable in current models.

(4) For model testing, instead of citing AUC value of .78, readers expect to know if this model performs better than an alternative or at a minimum the null model. Also, show the model

validation statistics in each table and cite the name of the survey and sample size in a footnote so that it can stand alone irrespective of the text..

(5) The authors report a very high level of unmet need compared to that in the BDHS 2022 report. Is it because of highlighting a different sample? I'd explain this difference for clarity.

(6) Please share the code for transparency and reproducibility.

(7) The text below sounds vain, grammatically incorrect and AI generated. Please use clear language and avoid using the term, generative health.

"Finding how digital knowledges (sic), such as internet use effect generative health performances can notify interferences (sic) that are more reasonable, embattled, and active."

(8) The phrase, 'the national association between internet use and unmet need' is awkward. Using the national level data does not make an association national.

(9) Please share a supplemental table, showing seperate columns for each variable's name, question, responses, and coding scheme, for transparency.
